CheXPhoto Dataset Description

Overview

- Provided by Stanford ML group as a part of competition
- Parent Dataset: ChexPert, randomly sampled 3000 unique patient's data from ChexPert

Data Preprocessing

Metadata Cleaning

- Selected only five among 14 observations
- Age and sex included for passing into the network
- Images with NAN labels converted to 0
- Images with -1 labels ignored
- Only frontal images selected

Image Cropping

- Labeling tool used to create 600 Hand Labeled training Images
- YOLOv3 (You Only Look Once) custom object detection with DarkNet
- Trained for 10 hours on Google Colab

YOLO

Data Resize and Normalization

- Resized all the images to 224x224x3
- Min-Max Normalization

Data Augmentation

- Highly Imbalanced Classes
- Keras Image Generator Class
- Parameters adapted from Previous Paper

```
aug = ImageDataGenerator(  
    featurewise_center=False,  
    featurewise_std_normalization=False,  
    rotation_range=10,  
    width_shift_range=0.1,  
    height_shift_range=0.1,  
    horizontal_flip=True,  
    brightness_range=(0.9, 1.1),  
    zoom_range=(0.85, 1.15),  
    fill_mode='constant',  
    cval=0.,  
)
```

Challenges

Hardware Scarcity

- Only one computer with enough computational resources

COVID-19

- One team member short during crucial last week

Future Work

Iterate

- Enhance performance
- Hyperparameter Tuning

Extend

- Hybrid Neural Network (CapsNet + SqueezeNet)
- Mobile Application
- Transfer learning from Parent Dataset

Document

- Write a research paper
